

Implemented EC-CA3-CA1 memory

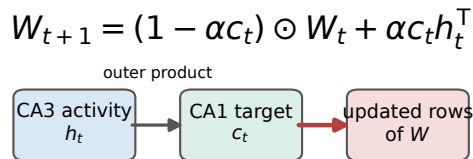

A

Storage changes only CA3→CA1; retrieval is read-only

Exact target-gated update

B

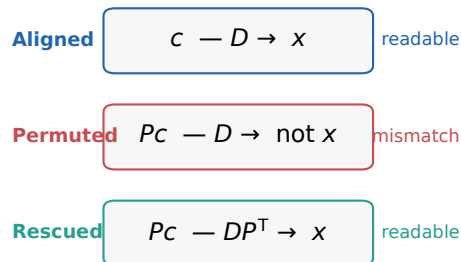

Active target coordinates overwrite toward the current CA3 code

BTSP-inspired activity-level rule; no explicit eligibility or plateau timing trace

Coordinate compatibility, not information loss

C

Fixed and rescued conditions learn identical plastic weights

Representative stored memory (seed 507)

D

$\cos = 0.60$ $\cos = 0.00$ $\cos = 0.60$

Example rule: median seed, then memory nearest that seed's median
