

Five paired controls isolate decoder compatibility

A

Aligned c , fixed D	Fixed permutation Pc , fixed D	Matched decoder Pc , matched DP^T	Random matched c_j , fixed D	No plasticity no update, fixed D
----------------------------	---------------------------------------	--	-------------------------------------	---------------------------------------

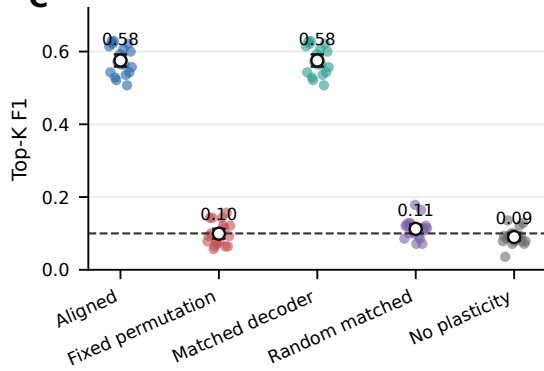

B

Content decoding after 28 stores

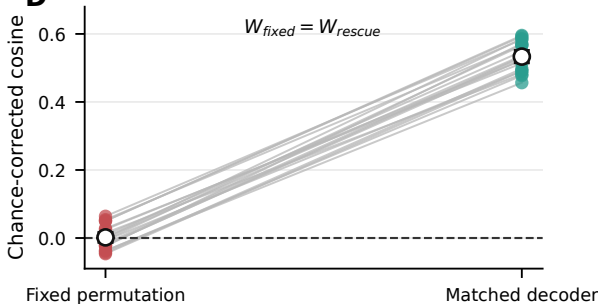

C

Active content recovered

D Matched readout rescues identical learned weights

E Decoding falls smoothly with coordinate mismatch
